

```
7 function addToCart() {  
  ...  
15 if(!coupon.expired){  
16   coupElem.removeClass(customer.couponStatus);  
17   customer.couponStatus= coupon.Id + '-' + 'used';  
18   price -= coupElem.data('value');  
19   coupElem.addClass(customer.couponStatus);  
  ...  
}
```

The diagram illustrates the flow of execution for the `addToCart` function. Dashed arrows show the sequence of operations: from line 16 to line 17, from line 17 to line 18, and from line 18 to line 19. A dashed arrow also points from line 19 back to line 15, indicating a loop. Additionally, a dashed arrow points from the closing brace of the `if` block (line 19) to the closing brace of the `addToCart` function (line 7).
