

```
14  function addToCart() {  
15  var coupElem= $("#couponButt");  
16  selItem= getItemInfo($(this));  
    ...  
21  var price= selItem.price * selItem.quantity;  
22  if(!coupon.expired){  
    ...  
25  price -= coupElem.data('value');  
26  coupElem.addClass(customer.couponStatus);  
27  coupon.expired=true;  
28  }  
29  customer.payable += price;  
30 }
```

The diagram illustrates the control flow of the `addToCart` function. It shows a sequence of arrows starting from line 16, passing through lines 21, 22, 25, and 26, and finally reaching line 29. This indicates that the code blocks between these lines are executed sequentially as part of the function's logic.
