

```
14 function addToCart() {  
15     var coupElem= $("#couponButt");  
16     selItem= getItemInfo($(this));  
    ...  
21     var price= selItem.price * selItem.quantity;  
22     if(!coupon.expired){  
        ...  
25         price -= coupElem.data('value');  
26         coupElem.addClass(customer.couponStatus);  
27         coupon.expired=true;  
28     }  
29     customer.payable += price;  
30 }
```

A diagram on the left side of the code block shows four curved arrows originating from the line numbers 16, 21, 22, and 25, and all pointing towards the closing curly brace of the function on line 29. This indicates that these specific lines are the exit points from the function.
